PHS - Public Health Sciences

Courses numbered 100 to 299 = lower-division; 300 to 499 = upper-division; 500 to 799 = undergraduate/graduate.

PHS 150. Workshop (0.5-3).
Intensive study of topics related to health sciences. Differing topics are denoted by a letter following the course number (i.e., 150C, 150P, etc.).

PHS 150B. Balance and Cardio Dance (0.5).
Dance, regardless of its style, can significantly improve muscular strength and endurance, balance and other aspects of functional fitness in older adults. This exercise class is specially designed for older adults, focusing on balance, using elements from modern, ballet and other forms of dance. Class goal is to maintain and/or regain stability and balance for everyday life. Cardiovascular (aerobic) activity is also addressed during faster-paced dance styles such as swing, waltz, lindy hop and line dancing.

PHS 321. Introduction to Alternative and Complementary Medicine (3).
A fundamental and basic knowledge of medical therapies that are alternatives to or complementary of traditional Western medicine. Covers naturopathy, traditional Chinese medicine, homeopathy, botanical medicine, massage therapy, chiropractic, etc. Examines research evidence for effectiveness and how these therapeutic approaches may blend with and complement the more traditional clinical approach. Combines didactic presentations with a mix of demonstrations by alternative health care providers, visits by patients, case studies and small group presentations.

PHS 325. Introduction to Epidemiology (3).
Introduces the science and methodology of disease and risk surveillance in public health. Presents the foundations and structure used to solve medical and environmental health problems in the community with a focus on population health promotion and disease prevention. Includes lecture, film, group analysis and discussion. Prerequisite(s): MATH 111 passed with a C- or better.

PHS 325H. Introduction to Epidemiology Honors (3).
Introduces the science and methodology of disease and risk surveillance in public health. Presents the foundations and structure used to solve medical and environmental health problems in the community with a focus on population health promotion and disease prevention. Includes lecture, film, group analysis and discussion. Prerequisite(s): MATH 111 passed with a C- or better.

PHS 327. Introduction to Global Health Issues (3).
Overview of the complex health problems and challenges facing low and middle-income countries which experience the highest rates of global morbidity and mortality. Addresses strategies to improve the health status of these vulnerable populations, to appreciate how social, behavioral, economic and environmental factors influence the health of the population, and to implement techniques to prevent premature death and disability. Course content assists the learner by developing a broad view of global health problems and solutions. Course includes diversity content.

PHS 333. Organizational Behavior and Leadership in Health Organizations (3).
Designed to familiarize students with the classic themes and perspectives from the field of organizational behavior. Emphasizes the application of this material to leadership in health care through lecture, group and individual examination of the literature, analysis of case studies, and personal assessment.

PHS 344. The Role of Culture in Health and Health Care (3).
Examines the importance of culturally-informed care as a professional responsibility in health services and is designed to critically examine cultural competency and the underlying challenges of responding to health disparity. Cultural context constructs the ways people frame, define, react to, and treat illness and other health risks. Many factors, such as age, identity, ethnicity, education, religion, income, family tradition, status and ability, shape individual illness experience. When combined with influences such as power, hierarchy in medicine, authority, resource allocation and technology, differences between the patient’s and provider’s understanding of, and response to, illness can result in poor health outcomes. Therefore, students are challenged to increase awareness and understanding of diversity to build a foundation for providing culturally-responsive, person-centered systems and approaches to care. Course includes diversity content.

PHS 344H. The Role of Culture in Health and Health Care Honors (3).
Examines the importance of culturally-informed care as a professional responsibility in health services and is designed to critically examine cultural competency and the underlying challenges of responding to health disparity. Cultural context constructs the ways people frame, define, react to, and treat illness and other health risks. Many factors, such as age, identity, ethnicity, education, religion, income, family tradition, status and ability, shape individual illness experience. When combined with influences such as power, hierarchy in medicine, authority, resource allocation and technology, differences between the patient’s and provider’s understanding of, and response to, illness can result in poor health outcomes. Therefore, students are challenged to increase awareness and understanding of diversity to build a foundation for providing culturally-responsive, person-centered systems and approaches to care. Course includes diversity content.

PHS 350. Workshop (0.5-3).
Explores the theory, research and skills associated with communicating health information, including: interpersonal patient, family and provider conversations, the role of technology related to health communication, health organization and policy, health communication and organization strategy, design and function. Emphasizes principles of health communication in various settings. Course includes diversity content.

PHS 356. Introduction to Health Administration and Policy (3).
Introduces the underlying principles, practices and concepts of health services administration both from an individual and organizational perspective. Covers planning, decision making, influencing and effecting change. Emphasizes how health care policy, an organization's external and internal environment, and technology influence organizational strategy, design and function.

PHS 356H. Introduction to Health Administration and Policy Honors (3).
Introduces the underlying principles, practices and concepts of health services administration both from an individual and organizational perspective. Covers planning, decision making, influencing and effecting change. Emphasizes how health care policy, an organization's external and internal environment, and technology influence organizational strategy, design and function.

PHS 410. Health Communication (3).
Helps students discover the vital role that health communication plays, and the factors influencing health communication in various settings. Principles of health communication are explored on many levels including: interpersonal patient, family and provider conversations, the role of technology related to health communication, health organization communication, communicating health data and statistics, risk communication, health promotion messaging and the role of media. Explores the theory, research and skills associated with communicating in these various contexts.

PHS 410H. Health Communication Honors (3).
Helps students discover the vital role that health communication plays, and the factors influencing health communication in various settings. Principles of health communication are explored on many levels including: interpersonal patient, family and provider conversations, the role of technology related to health communication, health organization
communication, communicating health data and statistics, risk communication, health promotion messaging and the role of media. Explores the theory, research and skills associated with communicating in these various contexts.

**PHS 413. Introduction to Social and Behavioral Aspects of Public Health** (3).
Course is based on the assumption that public health is a multi-disciplinary field aimed at reducing preventable morbidity and premature mortality, and promoting a higher quality of life in populations and groups through health intervention. While recognizing that biological, physical and medical care factors contribute to population health outcomes, this course emphasizes the relationship of behaviors as well as social and political structures to health outcomes. Highlights the importance of both local contexts and global practice for understanding and improving health. A social ecological framework forms the conceptual basis of the course, focusing attention on interactions between four levels of factors: individual, interpersonal, community and population. Designed to encourage an appreciation of the wealth of conceptual and methodological approaches in the social and behavioral sciences that can inform public health practice and research.

**PHS 416. Introduction to Environmental Health** (3).
Introduces students to the importance of the environment to human health by examining the causes and controls of major environmental health problems. Topics are structured around the things individuals and societies do that result in environmental health hazards — including energy production, industry, food production, and the modern lifestyle — as viewed through both a local and global lens. Emphasizes environmental risk factors to susceptible populations and how they translate into public health policy and prevention. Students learn ways to protect and enhance their health, and to influence the quality of the environment. Includes lecture, film, group analysis and reflection.

**PHS 428. Health Care Organization** (3).
Covers concepts and issues of management, organization, and operations of health care organizations, stressing the unique character of health care delivery organizations. Emphasizes types of health organizations, leadership and managerial roles, organizational structure and dynamics, the external environment, quality assessment and improvement, planning and marketing with a focus on synthesizing resources and capabilities to meet organizational goals.

**PHS 448. Quality Improvement in Health and Health Care** (3).
Addresses quality improvement (QI) in health services organizations. Students learn about the history and current status of quality improvement initiatives, QI models, QI tools and the role of quality in organizational strategic management. Upon successful completion of the course, students are equipped with a toolkit of resources that they can directly apply to improving processes that result in healthier patients and more effective and efficient systems.

**PHS 475. Leadership Capstone** (3).
Familiarizes students with the factors influencing successful professionalism in the health care setting. Emphasizes the application of course material to the development of the student's health care career. Course format includes lecture, group and individual examination of the literature, analysis of case studies, interprofessional education, and fieldwork. Prerequisite(s): health management majors enrolled in the health administration concentration only; must have completed the HM program core courses: HP 408, PHS 325, PHS 344, PHS 356 and PHS 410.

**PHS 478. Health Economics** (3).
Approaches health economics by following the flow of funds to describe the incentives and organizational structure of the health care system in the United States. Examines transactions between patients and providers, the role and results of insurance and government involvement, and some of the history of the U.S. health care system. Also considers national health spending and public health from a macroeconomics perspective.

**PHS 481. Cooperative Education** (1-8).
Provides the student with a field study that integrates theory with a planned and supervised professional experience designed to complement and enhance the student's academic program. Individualized programs must be formulated in consultation with, and approved by, appropriate faculty sponsors and cooperative education coordinators. Repeatable for credit. Prerequisite(s): instructor's and cooperative education coordinator's consent.

**PHS 485. Health Management Capstone** (3).
Provides the opportunity to develop skills and apply learning from across the curriculum to a series of issues and problem-solving situations in public health. Students develop a model for professionalism required by those working in the field, assess and evaluate ethical decision-making situations which integrate the program core, build capacity for lifelong learning, and complete an applied group project that synthesizes content and knowledge from across the curriculum. For students in the last semester of their program of study. Prerequisite(s): health management majors only; and must have completed the health management core courses: HP 408, PHS 325, PHS 344, PHS 356, and PHS 410. Pre- or corequisite(s): PHS 494.

**PHS 490. Independent Study** (1-6).
Supervised intensive study of special topics and problems relating to health care delivery. Repeatable for a total of 6 credit hours. Prerequisite(s): program consent.

**PHS 494. Health Management Practicum Preparation** (0).
Facilitates students' preparation for the practicum experience. Includes developing interview skills, resume building, selecting a practicum placement site, and developing a learning contract. Pre- or corequisite(s): PHS 485.

**PHS 495. Health Management Practicum** (3).
 Enables students to apply skills and knowledge through a supervised field training experience in a health care setting that complements the student's interests and career goals. Enables students to gain practical experience as professionals under conditions conducive to educational development. Students may select, with the consent of the practicum coordinator, an internship in an appropriate health or social service organization. Requires participation in a broad fieldwork component, completion of a focused project component, and a written report of the experience. Repeatable for a maximum of 6 credit hours. Prerequisite(s): PHS 494 or instructor's consent.

**PHS 501. Field Research Health Science** (1-3).
Examination of the methods of participant observation, data collection and interview as approaches to understanding issues in health science. Students gain practical experience in these methods through individual fieldwork projects. Repeatable for credit up to 6 credit hours. Prerequisite(s): instructor's consent or 12 credit hours of public health sciences credit.

**PHS 575C. Domestic Human Trafficking** (3).
Cross-listed as SCWK 611C. This course will build on the undergraduate and graduate student’s knowledge in working with individuals, groups, and communities with a specific focus on populations at-risk of and/or subjugated to domestic trafficking. With specialized instruction regarding domestic human trafficking, particularly domestic minor sex trafficking, this course aims to equip students with the practice knowledge, skills, and ethics in order that they might engage in effective anti-trafficking responses. Topics
covered within this course include: forms of human trafficking; those
involved; risk and resiliency factors; prevention; and direct-services
through the prevention, assessment, identification, intervention/
restoration, and termination/transition/prosperity process (Countryman-
Roswurm, 2015).

PHS 575K. Supervisory in Healthcare Graduate Bridge (1). This
course is a study of supervisory management concepts and

techniques that apply to healthcare organizations and programs.
Emphasis is on understanding the healthcare environment and

its various healthcare settings, the identification of issues facing
front-line employees, supervisors and mid-level managers, and the
development of administrative and leadership skills necessary to

successfully lead healthcare work teams. It identifies, analyzes and
solves problems that clinical department heads, supervisors and other
health related mid-management personnel encounter in their work.
This course is intended for students who completed HMCD or PHS 621
as an undergraduate, but did not complete the additional graduate
requirements. Prerequisite(s): PHS 621 (HMCD 621).

PHS 575L. Human Resources in Healthcare Graduate Bridge (1).
This course is intended for health care management students who

will assume responsibility for managing people in health services
organizations. The course is an introduction to the essential theories,
components, and issues of human resource management in the health
care field. It includes, among many other topics, the study of the
effectiveness of the human resource management function, employee
recruitment, selection, training, performance appraisal, benefit and
compensation, employee relations and other relevant legal requirements
affecting employment in the health care sector. Students enrolled in
this course will be required to learn and to demonstrate the ability
to analyze human resources problems and to find and present sound
solutions. This course is intended for students who completed HMCD or

PHS 622 as an undergraduate, but did not complete the additional graduate
requirements. Prerequisite(s): PHS 622 (HMCD 622).

PHS 575M. Quality Graduate Bridge (1). This course addresses quality
management in health services organizations, with a focus on a systematic approach to meet the
Institute of Medicine's aim to provide care that is safe, effective,
patient-centered, timely, efficient and equitable. The history and
current status of quality management initiatives, as well as the role
of quality in organizational strategic management are presented.
Students learn the role of quality from theory to application in a broad
base of organizational settings. This course is intended for students who
completed HMCD or PHS 648 as an undergraduate, but did not complete the additional graduate requirements. Prerequisite(s): PHS 648 (HMCD 648).

PHS 575N. Care of Populations: Public Health Science (0.5).
Focuses on the core competency for Public Health Professionals, Public
Health Science Skills, Tier 1. Focuses on the science of public health
practice which integrates, competencies, essential services, retrieval
of evidence, and core functions toward the goal of improving the
health of populations. As part of the course requirements, the student
completes step 1 of an integrated community health assessment and
health improvement plan.

PHS 575O. Care of Populations: Care Leadership & Systems
Thinking (0.5).
Focuses on the core competency for Public Health Professionals, Public
Health Science Skills, Tier 1. Focuses on the science of public health
practice which integrates, competencies, essential services, retrieval
of evidence, and core functions toward the goal of improving the
health of populations. As part of the course requirements, the student
completes step 1 of an integrated community health assessment and
health improvement plan.

PHS 575P. Care of Populations: Financial Planning &
Management (0.5). Focuses on the core competency for Public Health Professionals, Public
Health Science Skills, Tier 1. Focuses on the science of public health
practice which integrates, competencies, essential services, retrieval
of evidence, and core functions toward the goal of improving the
health of populations. As part of the course requirements, the student
completes step 1 of an integrated community health assessment and
health improvement plan.

PHS 575Q. Care of Populations: Community Dimensions of
Practice (0.5). Focuses on the core competency for Public Health Professionals, Public
Health Science Skills, Tier 1. Focuses on the science of public health
practice which integrates, competencies, essential services, retrieval
of evidence, and core functions toward the goal of improving the
health of populations. As part of the course requirements, the student
completes step 1 of an integrated community health assessment and
health improvement plan.

PHS 575R. Care of Populations: Cultural Competency (0.5). Focuses on the core competency for Public Health Professionals, Public
Health Science Skills, Tier 1. Focuses on the science of public health
practice which integrates, competencies, essential services, retrieval
of evidence, and core functions toward the goal of improving the
health of populations. As part of the course requirements, the student
completes step 1 of an integrated community health assessment and
health improvement plan.

PHS 575S. Care of Populations: Policy Development & Program
Planning (0.5). Focuses on the core competency for Public Health Professionals, Public
Health Science Skills, Tier 1. Focuses on the science of public health
practice which integrates, competencies, essential services, retrieval
of evidence, and core functions toward the goal of improving the
health of populations. As part of the course requirements, the student
completes step 1 of an integrated community health assessment and
health improvement plan.

PHS 575T. Health Science Capstone (3). Designed to familiarize students with the factors influencing successful
professionalism in the health care setting. Emphasizes the application of
course materials to the development of the student’s health care career.
Course format includes lecture, group and individual examination of
the literature, analysis of case studies, inter-professional education and
fieldwork. This course is for undergraduates in the BSHS program
only. Prerequisite(s): HS program core courses (PHS 325, PHS 344,
PHS 356, PHS 410 and PHS 642).

PHS 621. Supervisory Management in Health Care
Organizations (3). Cross-listed as HA 621. Studies supervisory management concepts
and techniques that apply to health care organizations and programs.
Emphasizes understanding the health care environment and its
various health care settings, identifying issues facing front-line
employees, supervisors and mid-level managers, and the development
of administrative and leadership skills necessary to successfully lead
health care work teams. Identifies, analyzes and solves problems
that clinical department heads, supervisors and other health-related
mid-management personnel encounter in their work. The principles
of effective management techniques — planning, decision making,
organizing, budgeting, time management, leadership, direction,
delegation, communication, motivation, discipline, performance
appraisal, managing change, teamwork, effective meetings, working
with unions, quality improvement and career development — are covered.

**PHS 622. Human Resource Management in Health Care Organizations** (3).
Cross-listed as HA 622. Intended for clinical health care professionals who will assume responsibility for managing people in health services organizations. Introduces the essential theories, components and issues of human resources management in the health care field. Includes, among many other topics, the study of the effectiveness of the human resources management function, employee recruitment, selection, training, performance appraisal, benefits and compensation, employee relations and other relevant legal requirements affecting employment in the health care sector. Covers issues of contemporary relevance for human health services resource departments such as employee health and safety, employee assistance programs, occupational stress and job burnout, use of the Internet in the workplace, violence in the workplace, and work/family issues. Students are required to learn and demonstrate the ability to analyze human resources problems and to find and present sound solutions. Students are expected to learn and demonstrate effective group working skills as they join small groups and engage in collaboratively solving a number of human resources management problems.

**PHS 624. Community Development Methods** (3).
Builds on the foundation of public health by examining a variety of advanced methods, theories and skills used for community development. Students familiarize themselves with the approaches used to assess and improve health outcomes in a community context, and familiarize themselves with how to effectively apply these approaches. Includes lecture, group and individual projects, fieldwork and visiting lectures from practicing community development professionals.

**PHS 642. Financing Health Care Services** (3).
Examines the principles of financial analysis and management, used in health care institutions, which are most useful to nonfinancial personnel. Emphasizes understanding and application of general financial concepts crucial to the health setting; considers financial organization, sources of operating revenues, budgeting and cost allocation methods. Uses examples for various types of health service organizations. Pre- or corequisite(s): BADM 162.

**PHS 644. Program Planning and Evaluation** (3).
Introduces students to the planning, development and evaluation of health programs through the use of lecture, group projects and individual presentations. Students familiarize themselves with a variety of approaches available in the field of program planning. Emphasizes the application of this material to the development of a program plan.

**PHS 648. Concepts of Quality in Health Care** (3).
Cross-listed as HA 648. Addresses quality management in health services organizations, with a focus on a systematic approach to meet the Institute of Medicine's aim to provide care that is safe, effective, patient-centered, timely, efficient and equitable. The history and current status of quality management initiatives, as well as the role of quality in organizational strategic management are presented. Students learn the role of quality from theory to application in a broad base of organizational settings.
