Biomedical Engineering

The biomedical engineering program is intended for students who want to pursue careers where engineering interfaces with the physical and biological sciences. Biomedical engineering integrates physical, chemical, mathematical sciences and engineering principles for the study of biology, medicine, behavior or health. Biomedical engineering advances fundamental concepts, and develops materials, processes, implants, devices and informatics approaches for the prevention, diagnosis and treatment of disease, for patient rehabilitation and for improving health. Biomedical engineers develop devices and procedures that solve medical and health-related problems by combining their knowledge of biology and medicine with engineering principles and practices. Many do research, along with life scientists, chemists and medical scientists, to develop and evaluate systems and products such as artificial organs, prostheses, instrumentation, medical information systems, and health management and care delivery systems. Some specialties include biomaterials, biomechanics, medical imaging, rehabilitation engineering and orthopedic engineering. The biomedical engineering program is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org.

Biomedical Engineering Program Mission

The mission of the biomedical engineering program is to provide students a comprehensive education, including integration of the life sciences and engineering principles, to prepare the students to address health needs at the local, national and global levels.

Program Educational Objectives

The educational objectives of the biomedical engineering program are driven by WSU’s mission to be an essential educational, cultural and economic driver for Kansas and the greater public good, as well as the biomedical engineering program mission to address health needs. Specifically, biomedical engineering program alumni, within a few years of receiving their baccalaureate degree, will be successful professionals as evidenced by having:

1. Addressed problems at the interface of engineering, biology and medicine;
2. Pursued professional development, including further study in graduate or professional schools; and
3. Served in leadership roles in addressing societal needs at the local, national and global levels.

Majors in Biomedical Engineering

- BS in Biomedical Engineering (http://catalog.wichita.edu/undergraduate/engineering/biomedical-engineering/biomedical-engineering-bs)

Courses in Biomedical Engineering

- Biomedical Engineering (BME) (http://catalog.wichita.edu/undergraduate/courses/bme)

Note: For a course to be used as a prerequisite to BME courses, it must have been passed with a grade of C or better (generating 2.000 grade points or better).
